

Track and Slider Endstop with slidertrack 22 x 11

Slidertracks are made in:

Characteristic: Durable, Hard, Dimensionally stable, High melting temperature

Color: Black

Manufacturing method by: Infusion/injection ABS

ABS (Acrylonitrile Butadiene Styrene) is an impact resistant engineering thermoplastic. It is an amorphous polymer. It is made of three monomers: acrylonitrile, butadiene and styrene. Due to its physical properties, it is preferred for structural applications. These properties include high rigidity, resistance to shock, wear and tension. Used in electronic housings, auto parts, consumer products, pipe fittings and lego toys.
