

Slider 90 dgr for track 22 x 11mm with sliderstop

Slidertracks are made in:

Characteristic: durable, lightweight, hammer proof, smoothshape, better alternative Environmentally responsible products

Color: Black

Manufacturing method by: Extrusion

Injection moulding is a manufacturing process that allows for parts to be produced in large volumes. It works by injecting molten materials into a mould (or 'mold' in the United States). It is typically used as a mass production process to manufacture thousands of identical items. Injection moulding materials include metals, glasses, elastomers and confections, although it is most commonly used with thermoplastic and thermosetting polymers.
